

Entrust nShield® Connect Cable Retainer

You can use the cable retainer to secure the nShield Connect cables in place after mounting the unit in a 19" rack. To use the cable retainer:

1. Loosen the two cross-head screws on the rear of the nShield Connect.

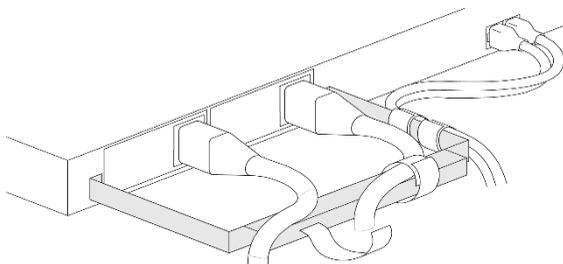

2. Fit the cable retainer by hooking it on the loosened screws, and then tighten the screws.

3. Connect the power cables and network cables to the nShield Connect, as described in the *nShield Connect Installation Guide*.

4. Unravel the hook and loop fasteners and wrap them around the cables to secure the cables to the cable retainer.

5. Ensure that the cable connectors are still firmly inserted.
